

# febi 179083, 179960

## To Fit:

Mercedes-Benz Trucks Actros IV, Antos, Arocs

Repl. no. 004 094 92 04 + 004 094 91 04

EN

## Design Change of Air Filter

Due to ongoing manufacturer development, sometimes replacement parts already in range must be changed to ensure they continue to match their OE equivalent. The air filter featured - fitted to various Mercedes-Benz commercial vehicles produced after 2011 with power outputs ranging from 238bhp to 626bhp - is the perfect example of this.

Mercedes-Benz redeveloped the air filter housing on these vehicles to incorporate additional air ducts. However, this meant that the original filter could no longer be used as it prevented the housing from closing correctly, and as such it too needed to be redesigned.

To ensure its range always offers workshops the parts they need, febi have done the same with its OE-matching equivalent, replacing article numbers 49561 and 49562 with the new 179083 and 179960.

These new filters can be installed in all vehicles fitted with either the original or the later redesigned housing. Filter performance is not affected by the change and corresponds to the original.

In addition to the filter highlighted here, febi offers a wide range of filters in original equipment quality for all common applications in the commercial vehicle sector.
