Quality „Made in Germany“ King Pin Sets from febi

The steering behavior of the vehicle can be negatively affected by numerous components of the chassis and steering system, for example by a worn out king pin.

Due to bad roads, overloading of the vehicle or lack of lubrication, the king pin and the bearings can wear out and get too much play in the axle beam. The consequences are a constantly shifting track on the front axle and unintentional steering movements. In this case the king pin including the bearings should be replaced immediately.

This king pin set is not available from Mercedes-Benz as a complete set and must be ordered with several spare part numbers. In contrast, the febi king pin set is supplied under febi number 182204 complete with all the necessary wear parts such as bearings, thrust collar and sealing ring.

febi king pins are manufactured precisely at the Ennepetal site in our own production facility. The high quality ensures problem-free installation, reliable function and a long service life.

The complete range of steering and suspension parts can be found at: partsfinder.bilsteingroup.com
