

febi 193185

To fit:

MAN Lions Explorer, TGA, TGM, TGS, TGX
Neoplan Skyliner

Repl. no. 51.08150.6177

EN

EGR Valve

In order to comply with current exhaust emission standards and their limit values, exhaust gas purification systems such as Selective Catalytic Reduction (SCR) or Exhaust Gas Recirculation (EGR) systems are required.

However, exhaust gas recirculation systems often suffer from problems caused by the EGR valve becoming blocked by oil residue and soot buildup. This prevents the EGR valve from functioning correctly, reducing or even entirely preventing control over the exhaust gas recirculation process.

The warning light for the exhaust system signals to the driver that there is a fault and the vehicle must be taken to a workshop. However, cleaning the EGR valve does not always eliminate the fault. If that is the case then the only option is replacement.

Note: Oil residue and soot deposits are often a result of oil leaks, e.g. on the turbocharger or cylinder head. If these leaks are not repaired then the same problem is likely to reoccur after a short time.

In addition to this reference, febi offers a wide range of EGR valves in OE-matching quality for many common applications in the commercial vehicle sector.

The complete range of replacement parts for the exhaust systems of commercial vehicles can be found at:
