

# Solution

**This gets on your customers' nerves!  
The Mercedes squeaks when starting  
or braking? Here is the solution:**

## **SWAG stabilizer bearing with fabric ply**

**e.g. SWAG no. 10 61 0032**

**e.g. comparison no. 124 323 49 85**

**SWAG is the only supplier in the free parts market  
who delivers these stabilizer bearings!**

The fabric ply prevents the direct contact between the rubber of the stabilizer bearing and the metal of the stabilizer. This ensures that squeaking noises are reliably avoided!

Please consider the potential for your workshop: The stabilizer bearings are suited for the series 124/129/201/202/208 and 210. Two pieces must be exchanged per repair and Mercedes.

**Ask your SWAG partner for spare parts by SWAG.  
You also find all spare parts at [www.swag.de](http://www.swag.de).**
